

PATIENT JOURNEY AUTOMATION FOR DENTAL CLINICS

Every enquiry deserves a next step.

How structured WhatsApp follow-ups help clinics capture enquiries, follow up consistently and bring patients back.

patientcurve.com

Patients rarely leave. They slip away.

Most clinics don't lose patients to a bad experience. They lose them in the gaps between conversations.

Late or missed replies

Enquiries that arrive after hours or on busy days wait, and the patient moves on to the next clinic.

No second message

A patient asks about aligners or implants, doesn't book on the first reply, and is never contacted again.

Missed visits stay missed

A no-show is noted, but nobody has the time to call and offer a new slot.

Past patients drift

Recall visits, check-ups and unfinished treatment plans depend on the patient remembering.

None of this is a staff failure. It's what happens when follow-up depends on memory and a busy front desk.

Follow-up has no owner and no system

The front desk is doing several jobs at once. Follow-up is the one that quietly gets dropped.

The desk is juggling

Calls, walk-ins, billing and WhatsApp all arrive at the same time. The patient in front of you wins.

Conversations live in a phone

Enquiries sit in one WhatsApp inbox, mixed with personal chats and old threads, with no status.

No list of who needs what

Nobody can see which enquiries are waiting, who hasn't booked, or who missed a visit last week.

No visibility for the doctor

Without numbers, it's hard to know where patients are being lost or whether ad spend is turning into visits.

Where patients are lost along the way

Every stage of the journey has a hand-off. Each hand-off is a place a patient can quietly drop out.

The fix isn't more effort from staff. It's a consistent, automatic next step at every hand-off, with a person stepping in only when needed.

Patientcurve: the 3-step patient recovery system

Patientcurve runs structured WhatsApp workflows on the clinic's own number, so every patient gets a timely, approved next step.

Not a chatbot that guesses. Every message is clinic-approved, and anything outside the agreed answers goes to your team.

From first message to booked appointment

A simple, rule-based flow. The clinic approves the content and rules; Patientcurve runs them.

Works with what the clinic already uses. Workflows run on the clinic's WhatsApp Business number. Calendar or software connections are added only where they are configured and tested for that clinic.

Turn more enquiries into appointments

New enquiry capture

Every WhatsApp enquiry is recorded with the patient's name, number and stated need.

Automated FAQ answers

Timings, location, consultation process and more, answered instantly with clinic-approved content.

Lead qualification

A few short questions to understand the treatment interest, so the right next step is offered.

Follow-up for unbooked enquiries

Timed, polite follow-ups for patients who asked but didn't book, until they book or opt out.

Appointment reminders

Reminders before each visit, with an easy way to confirm or ask to reschedule.

Missed appointment follow-up

Patients who miss a visit are invited to rebook, and staff are told when a call is needed.

Bring patients back and see what's working

Patient reactivation

Check-ins for patients who haven't visited in a while, with an easy way to book a routine visit.

Post-treatment follow-up

Care messages after treatment, and a prompt to continue plans or book the next stage.

Review requests

Asks patients for feedback after a visit and shares the clinic's Google review link. Concerns are flagged to the clinic.

Staff notifications

Your team is alerted when a patient asks for a call, raises a concern, or needs a person.

Enquiry and follow-up reporting

See enquiries, follow-ups, bookings and missed visits for the period, in one simple summary.

Choose what fits

Clinics start with the workflows that matter most and add more later. Nothing is switched on without approval.

What it looks like for a patient

An illustrative journey for a patient enquiring about aligners. Timings and messages are set by each clinic.

The front desk only stepped in once: to welcome the patient at the visit.

Automation handles the routine. Your team handles people.

Patientcurve handles

- Replying to new enquiries, day or night
- Answering common questions with approved content
- Sending follow-ups and appointment reminders
- Inviting patients who missed a visit to rebook
- Recall and review requests
- Keeping a status for every enquiry

Your team handles

- Clinical questions and treatment advice
- Pricing discussions and treatment plans
- Concerns, complaints and urgent cases
- Patients who ask to speak to a person
- Final say on every message and rule
- The welcome and care at the clinic

Know where every patient stands

A simple view of the patient pipeline, so the clinic can see what's working and where patients are still being lost.

New enquiries

Captured this period, by source where available

Awaiting follow-up

Patients who asked but haven't booked yet

Booked

Enquiries that became appointments

Missed visits

No-shows and whether they rebooked

Returning patients

Patients brought back through recall

Feedback

Review requests sent and concerns raised

Reports cover what the configured workflows can see. Data from other tools appears only where it is connected.

Live in four simple stages

WHAT A CLINIC NEEDS TO PROVIDE

- A WhatsApp Business number the clinic controls
- Clinic information: timings, services, location
- Approval of message content before go-live
- Staff contacts for notifications and handoffs
- Appointment status kept up to date where workflows rely on it
- Patients' agreement to receive WhatsApp messages

Built to be trusted by clinics and patients

Clinic-approved content

Every message and rule is approved by the clinic before it goes live, and can be changed at any time.

Minimal data

Only the information needed to run the agreed workflows is used, and only for the clinic's own patients.

Consent first

Messages go to patients who have agreed to hear from the clinic, and they can opt out easily.

Honest integrations

Calendar and software connections are included only when they are configured and tested.

Clear costs

Setup and monthly fees are separate. WhatsApp charges set by Meta are shown clearly, not hidden.

No promised numbers

We set clear objectives, not guaranteed results. Outcomes depend on each clinic and its patients.

Questions clinics usually ask

Does this replace my receptionist?

No. It takes routine replies and reminders off the desk so your team can focus on patients in front of them.

Can we control what patients receive?

Yes. You approve every message before go-live and can ask for changes at any time.

Are WhatsApp charges included?

Meta's WhatsApp conversation charges are billed separately at actual cost unless stated otherwise.

Do we need new software?

No. Workflows run on your WhatsApp Business number. Other tools are connected only where it's agreed.

What happens when a patient needs a person?

The patient is told someone will reach out, and your team is notified with the details.

Will it work for my clinic?

We start with a discovery call to understand your enquiries and process, then propose only what fits.

NEXT STEP

Let's make patient follow-up more consistent.

Book a short discovery call. We'll map how enquiries reach your clinic today and show where structured follow-up could help.
